

# IP Link® File Manager

FILE MANAGEMENT SOFTWARE

- Available for free
- Intuitive, familiar interface for easy operation
- Auto-discovery of IP Link devices on the network
- Batch file upload and download capabilities
- File transfer verification
- Full file and directory modification (create, delete, drag, drop, move, copy, and rename)

Extron IP Link® File Manager software allows an administrator to manage the Web pages, graphic images, event scripts, and other files stored on IP Link-enabled devices. IP Link File Manager provides an easy-to-use interface for adding and deleting files and for controlling the directories in which files are stored.

# DESCRIPTION

Extron IP Link® File Manager is a powerful program for uploading and downloading files to and from a PC and IP Link-enabled devices. Files such as Web pages, graphics files, and event scripts can be organized into user-configurable directories (folders) and copied to or from an IP Link device using familiar drag-and-drop and cut-and-paste functionality.

The user interface offers multiple view options and the ability to configure many elements of the look and feel. IP Link Manager provides side-by-side views with files on the PC on one side and files on an IP Link-enabled device on the other. Directories can be created and deleted easily and files can be organized for efficient access. IP Link File Manager allows full control of the directory structure, including the ability to create, delete, drag, drop, move, copy, and rename files and directories. Directory trees can be expanded or collapsed to make finding files easier.

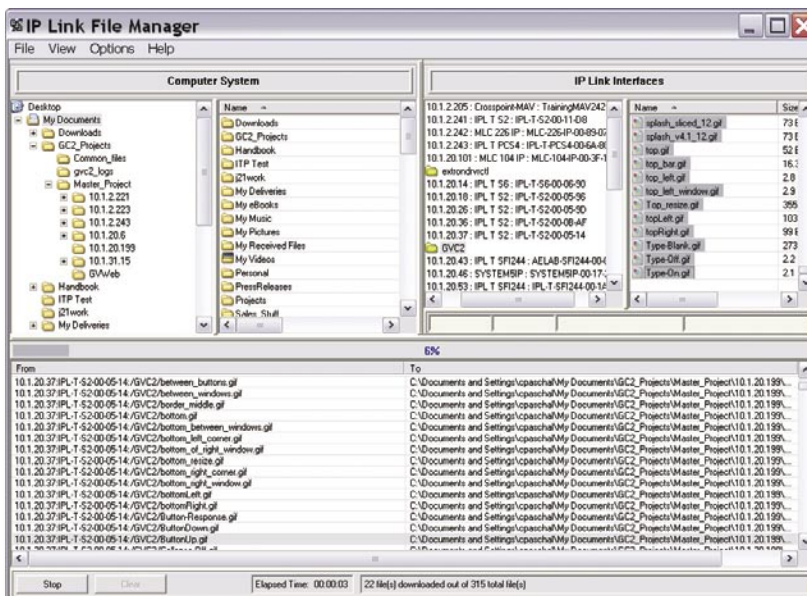

Batch file transfers either to or from the IP Link-enabled device are easy to set up and the progress of each file transferred is displayed in real time in the bottom Transfer Queue window. The Transfer Queue window also reflects a history of all file transfers performed.

# FEATURES

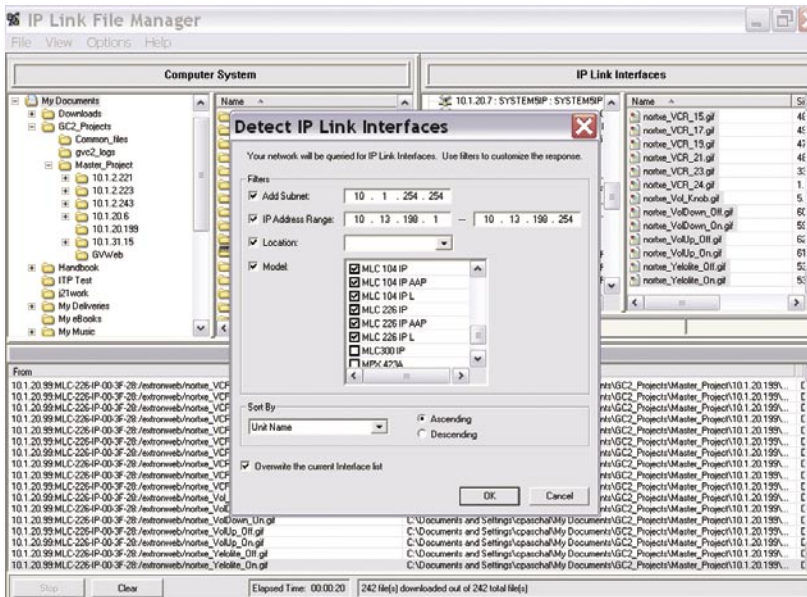

- Available for free
- Intuitive, familiar interface for easy operation
- Auto-discovery of IP Link devices on the network
- Batch file upload and download capabilities
- File transfer verification
- Full file and directory modification (create, delete, drag, drop, move, copy, and rename)

# SYSTEM REQUIREMENTS

- Intel® Pentium® III processor or later with at least a 1 GHz clock speed
- Microsoft® Windows NT, Windows 2000, Windows XP, or later operating system
- 256 MB of RAM
- 5 MB of hard disk space
- A network connection with a minimum data transfer rate of 10 Mbps

Simultaneously view files and real-time status of batch file transfers.

Quickly search for available devices on the network.
