WallVault®
Systems

Complete audio/video solutions for classrooms with wall mounted ultra short-throw projectors or flat panel displays

- Complete, centralized AV switching and control systems with stereo amplification
- Designed for classrooms with a wall mounted short-throw projector or flat panel display
- Extron-exclusive Auto Power Save and Standby modes lower energy usage and reduce operating costs
- Systems use CAT 5-type cable for quick and easy connections and low-cost installation
- Network connectivity for Web-based monitoring, support and AV asset management
Extron WallVault® Systems are easy-to-use, network-enabled, all-inclusive packages, making them ideal for single-projector K-12 classrooms. These systems were specifically developed for classrooms with a wall mounted short-throw projector or flat panel display. WallVault Systems use economical twisted pair cable for transmitting signals and include network connectivity for Web-based resource management, monitoring, and control. Extron WallVault Systems take their name from the unique USFM 100 and WMK 150 enclosures that securely mount and conceal system switching and audio amplification components to the wall.

**Designed for K-12 Classrooms**

When it comes to adding an AV control system to the classroom, educators, instructional technologists, and school administrators have told us they have three primary concerns: the system should be easy to use, reliable, and sized properly to meet the needs of the classroom.

WallVault Systems are designed to create a complete classroom AV technology integration solution that offers benefits for teachers, students, and administrators alike. Teachers will enjoy the simplicity of the system controller and enhanced sound quality. Students will benefit because technology that is easy to use gets used more often. Administrators will appreciate the ability to centrally monitor all classroom systems using the network, as well as the expandability offered by the WallVault switcher, which enables the addition of video and audio sources beyond the capacity of the projector or display.

All of the products in the WallVault Systems are designed and made by Extron and are optimized to work together, providing the most economical system solution. WallVault Systems are predesigned for quick and easy installation, resulting in a significant reduction in design and installation costs.

A teacher can control the entire classroom AV system through the intuitive wall- or lectern-mounted Extron MediaLink® controller, which eliminates the need for a handheld IR remote and can significantly reduce calls for help. Overall, WallVault Systems help schools integrate technology in the classroom to the benefit of educators and students alike.
WallVault System Benefits

Active Wallplates
WallVault System video and audio connections are made using proven, reliable, and cost-effective CAT 5-type twisted pair cable.

Complete System
WallVault Systems, whether standard or customized, streamline the design and procurement process, saving both time and money. Each system includes nearly 20 separate products, yet the entire system is ordered using a single part number. WallVault Systems include all the necessary audio and video switching, audio amplification, system control, source connectivity, speakers, mounting hardware, and cabling for a complete classroom AV solution. All that remains is to add the sources and video projector or flat panel display.

Simplifies Installation While Saving on Space
In typical classroom AV systems, audio and video switching and amplification devices are mounted in a lectern or on a shelf or desktop. Too often, the equipment is unsecured, unsightly cables are visible, and valuable floor space is used. WallVault Systems place the key products on the wall, so no equipment rack or tabletop space is required and cables are hidden away. Installation is simplified through the use of CAT 5 twisted pair cable and wall-mounted source signal transmitters.

View Ease of Installation
To see how easy it is to install Extron Classroom AV Systems, view our installation videos online at http://www.extron.com/pvinstall.

Power Saving Features
At the heart of each WallVault System is the PVS 305SA IP Five Input IP-Enabled Switcher with Integrated 50 Watt Audio Amplifier that offers two Extron-exclusive power saving modes designed to lower energy usage and reduce operating costs.

- Auto Power Save Mode: This mode automatically shuts off the audio amplifier after 30 minutes of inactivity, providing a close to 50% reduction in energy usage compared to normal, idle operation.

- Standby Mode: This mode shuts off both the audio amplifier and the AV input wallplates, reducing power consumption of the switcher over 60%.

Economical, Easy-to-Install Cables
WallVault Systems use proven, reliable, and cost-effective CAT 5 twisted pair cable for carrying video and audio input source signals between the wallplate input and switcher. In most cases, power and high resolution AV signals are sent over the same CAT 5 cables.

Twisted pair cable is lighter, smaller, and more flexible than coaxial cable, so it is easier to route through walls and pull through small conduit, making it ideal for use in retrofitting existing classrooms and even easier for new construction. The connectors used with CAT 5 cable are also easier to attach to the cable and don’t require skilled and costly technicians for installation.

Active Wallplate
WallVault Systems use active, balanced twisted pair transmission technology. Active, balanced signals are resistant to signal loss as well as interference, insuring optimum picture quality at the display. All these features add up to make WallVault Systems more economical to purchase and install than those using standard coaxial cable for audio and video.

Easy To Control
The MLC 104 IP Plus MediaLink Controller included in standard WallVault Systems is designed to simplify operation of the classroom AV system. With large, backlit buttons and a simple volume control knob, the controller is almost as easy to use as a light switch. Teachers with little or no training can learn to operate the system in a few minutes.

The MediaLink controller is easy to use.
WallVault System Benefits

The standard controller employs only six buttons: two for ON/OFF control of the projector or display, and four source control buttons for selecting between a computer, VCR, DVD player, or any other source connected to the system. Removable button caps make it easy to label each button to clearly indicate its function; labels can be quickly changed and don’t require programming or engraving. Controlling the volume of the presentation is as simple as turning the volume knob. For added functionality, optional controller models are available, all based on the same simple user interface.

Eliminate Multiple Remotes
The MediaLink controller eliminates the need for multiple handheld IR remotes that can be lost or stolen. There are no batteries to replace and no confusing menus to memorize. When WallVault Systems are installed in multiple classrooms, teachers will confidently move from room to room when necessary, always encountering the same familiar control panel, no matter which projector or display is used.

Built-in Ethernet Control
The MLC 104 IP Plus MediaLink Controller features built-in IP Link® Ethernet control and is configurable using the Free Global Configurator software, which makes installation as simple as selecting choices from intuitive, drop-down menus instead of writing, compiling, and de-bugging complicated programming code. The MLC 104 IP Plus supports Extron’s Free GlobalViewer®, a Web-based campus-wide resource management and control software application that provides a powerful, flexible way to manage, monitor, and control IP Link products remotely and in the classroom.

Graphical User Interface Option
Technology enhanced classrooms provide instructors with new tools to teach and interact within the presentation environment. Many instructors prefer the flexibility of not only controlling the environment via an in-room controller mounted on a wall or lectern, but also from a control page on a computer monitor or wireless device. With WallVault Systems, an instructor can control the projector, DVD player, VCR, screen, lights, and more from a colorful Web page on a laptop or classroom computer equipped with a mouse or touchscreen monitor.

Each WallVault System includes a ready-to-use default Graphical User Interface or GUI. In addition, there are two ways to create a customized GUI. You can select one of our free templates to create your own, or let Extron software developers do the work for you with our economical GUI Customization Service.

Enhance the Classroom Audio
Attempting to run the presentation audio through the projector might be seen as a money saving option, but it results in poor quality sound and a low volume level. Projectors just don’t have the speakers or amplification to produce quality sound and overcome noise in the classroom.

Extron Patented Flat Field® Speakers
Many classrooms have acoustical tile ceilings that are suspended from the roof or floor structure above the classroom. This forms a space or “plenum” between the suspended ceiling and the building. For voice and program material, standard WallVault Systems provide code required plenum rated wide dispersion ceiling speakers that distribute the sound across the entire classroom. Extron patented Flat Field FF 120 Speakers are specially designed to work with WallVault Systems and offer ease of integration with standard ceiling tiles. The FF 120 utilizes Extron’s unique Flat Field Technology for consistent sound levels across the listening area, thus reducing the number of speakers required. As an option, you could select wall mounted program speakers which can be mounted near the projection screen. For a technical white paper on the Extron exclusive, patented Flat Field FF 120 Speaker, go to www.extronclassroom.com/whitepapers

FF 120 plenum rated speakers utilize Extron exclusive Flat Field Technology and wide dispersion to fill the room with high quality sound.
WallVault System Benefits

Together with the included WallVault System speakers, the powerful new 50 watt audio amplifier built into the switcher offers all the power necessary to deliver more sound level than needed for the small to medium size classroom. The WallVault System switcher with integrated audio amplifier offers a robust and even distribution of audio throughout the classroom.

**Flexible and Expandable Source Switching**
The 50 watt switcher/amplifier at the heart of the WallVault System does all the work of signal routing externally to the projector. This allows expansion of the classroom AV signal switching capability beyond what is available using projector switching alone. Students will enjoy the presentation experience and teachers will enjoy presenting. The energy efficient PVS 305SA IP features new Auto Power Save and Power Standby modes to reduce power consumption by as much as 60% when idle.

Standard WallVault Systems accept two, three, or four source input signals. The four input system offers two high resolution computer video signals and two configurable inputs for either computer or composite video signals. WallVault Systems also support HDMI and DVI-D video in classrooms with projectors that offer these inputs. Optional extenders transmit the video directly to the projector and audio playback is handled by the WallVault switcher/amplifier.

WallVault Systems allow for the integration of existing AV sources, such as computers, laptops, DVD players, VCRs, document cameras, and more. In addition, WallVault is designed to readily adapt to future changes. If you upgrade your DVD players, for example, audio and video connections are easy to make and the system will operate exactly as before the upgrade. WallVault Systems offer the flexibility and expandability to ensure they will meet tomorrow’s needs as well as the needs of today.

**Extron VoiceLift® Microphone Option**
The Extron VoiceLift Microphone is an infrared wireless microphone system that integrates seamlessly into WallVault installations. The VoiceLift series of products includes an IR receiver, a charging station, and a wireless pendant microphone with DSP technology for feedback elimination. Adding the VoiceLift Microphone to a WallVault System enables the teacher’s voice to be heard clearly throughout the room. The lightweight pendant microphone can be worn around the neck or clipped onto clothing, while the handled microphone is easy for students to use and increases classroom participation.

**Intelligent PA Sensing and Audio Muting Option**
To ensure that important public address announcements are never missed, the WallVault System is capable of sensing sound in the facility’s PA speakers. With the addition of an optional Priority Page Sensor Kit, any sound transmitted through the PA system will be detected immediately, and the PVS 305SA IP Switcher will mute the program audio. Once the announcement has ended, the program audio will be restored.

**Network Connectivity Helps Save Time and Money**
The controller offered with standard WallVault Systems features Extron’s IP Link, a network integration technology we specifically engineered to meet the needs of professional AV environments — from small K-12 classrooms to university and business applications. The IP Link-enabled MediaLink controller combined with the free GlobalViewer Web application provides a powerful and flexible way to remotely monitor, schedule, and control AV equipment over a network.

**Loss prevention with theft alerts:** WallVault System room controllers are always on and routinely poll their attached devices for status information. If any projector or display is physically disconnected from the network, the WallVault System monitoring its status will know immediately. In such an event, it can send an e-mail message notifying security personnel of the possible theft. For fast action, e-mails can be sent to multiple addresses as well as cell phones and wireless PDAs.
WallVault System Benefits

Reduced projector lamp and power costs: A projector that is left on over the weekend uses more power and lamp time than a week’s worth of typical classroom use. Projector lamps are relatively expensive, ranging from $200 to $400 or more. An administrator may want to turn off all projectors every day at a preset time. She might also want to schedule the controller’s front panel to lock out any unauthorized use after hours. With the controller’s internal clock and the free Extron software, these and many other automated tasks are easy to set up.

Accessible from anywhere: Because they are Web-based, GlobalViewer Web pages stored on the MediaLink controller can be viewed using Internet Explorer® version 6.0 or higher from any computer with access to the network. GlobalViewer can also store and display information about connected devices like serial numbers, owner identification, maintenance history, and installed firmware versions. This centralized data can be collected and used to reduce maintenance costs and guide future purchasing decisions.

Rapid problem resolution: You can troubleshoot WallVault Systems remotely, thanks to the real-time status of connected devices provided through the Free GlobalViewer Web application. Information such as connection status, power state, and current source selection is displayed in a central location. For many connected devices, technicians can toggle power on or off, switch sources, control volume, and more without leaving their office. Many common problems can be resolved without a trip to where the equipment is located.

Avoid surprises through preventative maintenance: Projector lamps generally have a lifespan of around 2,500 hours of usage. It can be very frustrating when a lamp reaches the end of its lifespan in the middle of a presentation. The networked WallVault System controller keeps track of the projector’s lamp usage and, thanks to the controller’s e-mail capabilities, you can set it up to send an e-mail when a predetermined number of lamp hours have been reached. This will alert an administrator to purchase a new lamp before it burns out.

IP Link vs. Proprietary Projector Software
We have found that most institutional installations do not have a single brand of projector in use across their entire campus. In addition, support personnel often need visibility to all of the components in an AV system when working through trouble calls. Extron’s IP Link technology is designed to network-enable every major brand of projector and unify them under a common support platform.

Looking further, a combination of projectors, VCRs, DVD players, switches, and other devices is the reality of most institutional installations. When we looked at the task of network enabling, monitoring, scheduling, and supporting projectors and their related equipment, we found IP Link and GlobalViewer to be the best and most flexible approach to meet this need.

The universal architecture of IP Link-enabled devices allows facilities to support a mixture of different brands, models, and versions of projectors on the same network. Older and lower cost projectors do not have built-in network connectivity. IP Link supports both network-enabled and non-network models. In addition to the projector, IP Link is designed to network-enable many other AV system components.

Another factor to consider is the often expensive software needed to monitor, schedule, troubleshoot, and control the projectors. IP Link interface hardware works in conjunction with our Free GlobalViewer Web-based resource management application. GlobalViewer software was created specifically to work with many makes and models of devices simultaneously.

Extron Satisfaction Guarantee
To underscore our commitment to quality, performance, and value, we offer our Satisfaction Guarantee. This means we will work diligently to resolve any issue you have with your purchase until you are completely satisfied. Extron employees are prepared to do whatever it takes to make certain that the entire process of doing business with us is a positive and professionally rewarding experience for you.

Extron WallVault System Design and Installation Support Program
Extron has assembled a dedicated team of system specialists with the technical expertise necessary to assist during every step of a WallVault System project. From initial design and bill of material creation, they will assist with providing reseller referrals, including information on state contracts that may be available in your area. The Extron Education Support Team has access to documentation to assist your project planners or architects with data submittals that are required for certain state construction agencies.

Our Integration Support Specialists provide support during and after installation, including a final call after installation, to ensure customer satisfaction and system optimization.

WallVault System Grant Program For Schools
The interaction of educational technology boosts student interest and achievement. To assist districts in the creation of a pilot classroom for evaluating and defining AV system standards, Extron has developed a WallVault System Grant Program. For more information, or to apply for the program, contact the Extron Education Support Team, or visit our Web site at www.extronclassroom.com/grant.

State Contract/GSA Pricing
Extron offers State Contract/GSA pricing on WallVault Systems for use in purchasing for state and federal contracts. For more information, please contact the Extron Education Support Team.
WallVault Systems

EACH STANDARD SYSTEM FOR ULTRA SHORT-THROW PROJECTORS INCLUDES THE FOLLOWING CORE COMPONENTS:

- One PVS 305SA IP Five Input IP-Enabled Switcher with Integrated 50 Watt Audio Amplifier - not available separately
- One MLC 104 IP Plus MediaLink Controller with IP Link - White
- One USFM 100 Short-Throw Projector Mount
- One UPB 25 Universal Projector Bracket
- One pair of FF 120 plenum rated Flat Field Speakers
- Two lengths of SPK 18 Precut Speaker Cable - Plenum, 35’ (10.6 m)
- One MLC IR/RS-232 Projector Communication Cable - Plenum, 50’ (15.2 m)

The only difference between the systems is the quantity and type of AV input wallplates and video cables included - see Unique Features for each system.

WVS 200
Two Input WallVault System

Unique Features

- Includes one PVT RGB D - VGA Computer-Video and Stereo Audio Input - Decora® Wallplate
- Includes one PVT CV D - Composite Video and Stereo Audio Input for a VCR or DVD Player - Decora Wallplate

Model | Version Description | Part Number
--- | --- | ---
WVS 200 | Two Input WallVault System | 42-149-13

For State Contract/GSA pricing and details about the WallVault Grant Program, contact an Extron Customer Service Representative.

WVS 300
Three Input WallVault System

Unique Features

- Includes two PVT RGB D - WallVault VGA Computer-Video and Stereo Audio Input - Decora Wallplate
- Includes one PVT CV D - WallVault Composite Video and Stereo Audio Input - Decora Wallplate
- Additional VGA input wallplate provides increased flexibility for adding an additional VGA source, such as a laptop or document camera

Model | Version Description | Part Number
--- | --- | ---
WVS 300 | Three Input WallVault System | 42-150-13

WVS 400
Four Input WallVault System

Unique Features

- Includes two PVT RGB D - VGA Computer-Video and Stereo Audio Inputs - Decora Wallplate
- Includes two PVT CV D - Composite Video and Stereo Audio Inputs - Decora Wallplate
- Additional video input wallplate provides increased flexibility for adding an additional composite video source, such as a VCR

Model | Version Description | Part Number
--- | --- | ---
WVS 400 | Four Input WallVault System | 42-151-13

For State Contract/GSA pricing and details about the WallVault Grant Program, contact an Extron Customer Service Representative.
WallVault Systems

**EACH STANDARD SYSTEM FOR FLAT PANEL DISPLAYS INCLUDES THE FOLLOWING CORE COMPONENTS:**

- One PVS 305SA IP Five Input IP-Enabled Switcher with Integrated 50 Watt Audio Amplifier - not available separately
- One MLC 104 IP Plus MediaLink Controller with IP Link - White
- One WMK 150 Wall Mount Kit
- One pair of FF 120 plenum rated Flat Field Speakers
- Two lengths of SPK 18 PreCut Speaker Cable - Plenum, 35’ (10.6 m)
- One MLC IR/RS-232 Projector Communication Cable - Plenum, 50’ (15.2 m)

The only difference between the systems is the quantity and type of AV input wallplates and video cables included - see Unique Features for each system.

**WVS 210**

**Two Input WallVault System**

**Unique Features**

- Includes one PVT RGB D - VGA Computer-Video and Stereo Audio Input - Decora® Wallplate
- Includes one PVT CV D - Composite Video and Stereo Audio Input for a VCR or DVD Player - Decora Wallplate

MLC 104 IP PLUS MEDIALINK CONTROLLER

The Extron MLC 104 IP Plus MediaLink Controller with built-in IP Link Ethernet Control included in standard WallVault Systems is an easy-to-use control panel. It is designed to simplify operation of the classroom AV system and enables Web-based remote diagnostics, asset management, and support. When WallVault Systems are installed in multiple classrooms, the MLC 104 IP Plus standardizes the control interface, making AV systems simple to use for anyone.

FEATURES

- Bidirectional RS-232 port for universal display control
- Three digital I/O ports configurable as a digital input or digital output for sensors, switches, LEDs, and relays
- Dedicated IR port for control of IR-controllable display devices and source equipment, such as VCRs and DVD players
- IR learning capability for capturing IR remote codes from a device’s handheld remote control
- Adjustable timer controls automatic shutdown to conserve energy and extend projector lamp life
- Front panel security lockout prevents unauthorized tampering
- Tri-color, backlit, easy-to-label buttons
- Volume control knob with volume indication
- IP Link Ethernet monitoring and control
- Integral high performance Web server with 7.25 MB flash memory for storing device drivers, GlobalViewer, and custom user Web pages
POLEVAULT SWITCHER/AMPLIFIER

The heart of each PoleVault System is the PVS 305SA IP Switcher/Amplifier. With four video inputs, a switched audio input, and an integrated 50 watt rms stereo audio amplifier, this switcher meets the needs of most single projector AV environments.

The PVS 305SA IP Switcher offers two high resolution RGB computer-video signals with stereo audio and two configurable inputs with stereo audio that support either RGB or composite video. The switched audio input supports audio from an HDMI video source or MP3 player.

The PVS 305SA IP features an integrated 50 watt rms stereo audio amplifier capable of driving up to four Extron speakers and filling the room with full, rich sound. A line level output allows system audio to be used with podcasting or assistive listening systems.

Also included in the PVS 305SA IP is an integrated four port network switch. This allows up to three devices within the classroom to share a single network drop.

FEAT URES

- Available exclusively as part of a PoleVault System
- Receives VGA computer video, composite video, and stereo audio signals from PoleVault AV input wallplates
- Integrated 50 watt rms audio amplifier for stereo or dual mono audio
- Receives audio and video signals, and provides power to AV input wallplates over CAT 5-type cable
- Integrated four port network switch allows three classroom devices to share a single network drop
- VoiceLift Receiver input simplifies installation of the VoiceLift Microphone
- A switched auxiliary audio input provides support for audio from an HDMI/DVI video source or MP3 player
- Independent input sensitivity adjustments are provided for program audio and VoiceLift Microphone
- Configurable audio line output for podcast recording, assistive listening systems, or adding an additional amplifier
- Paging sensor input mutes program audio when a public address system announcement is detected by the optional Priority Page Sensor Kit (part# 70-619-01)
- Auto Power Save and Power Standby modes provide energy efficiency to reduce operating costs
INCLUDED PRODUCTS

Each WallVault System product is designed and manufactured by Extron, ensuring that they will work together and function properly as a system. Each of the standard WallVault Systems includes nearly 20 separate components, including a switcher/amplifier, two to four video inputs, a MediaLink controller, mounting hardware, speakers, and cables. The following two pages provide an overview of the standard input wallplates, controller, speakers, and mounting hardware included in each system. See page 12 for optional products used to customize WallVault Systems.

AV INPUT WALLPLATES

### PVT CV D
**WallVault Composite Video and Stereo Audio Input - Decora® Wallplate**
- Transmits composite video and stereo audio signals to a PVS 305SA IP Switcher over a single CAT 5-type cable
- Composite video and stereo audio input on female RCA connectors
- IR pass-through provides control connections for IR-controllable devices

### PVT RGB D
**WallVault VGA Computer Video and Stereo Audio Input - Decora Wallplate**
- Transmits VGA computer-video and stereo audio signals to a PVS 305SA IP Switcher over two CAT 5-type cables
- VGA video input on a female 15-pin HD connector and audio input on a 3.5 mm stereo mini jack
- EDID Emulation provides selectable resolutions and refresh rates to ensure reliable operation
- IR pass-through provides control connections for IR-controllable source devices

SPEAKERS

### FF 120
**Extron Exclusive patented Flat Field Speaker**
- Plenum rated ceiling speakers designed for classrooms with a drop ceiling
- 1’ x 2’ (30.5 cm x 61 cm), 4.7 lb (2.1 kg) drop-in ceiling tile enclosure for suspended ceilings
- Extron patented Flat Field Technology for consistent sound levels across the listening area
- Full-range driver with a horn-loaded design provides extended low frequency response
- Wide 170° dispersion
- Designed and manufactured by Extron

CONTROLLER

### MLC 104 IP Plus
**MediaLink Controller with IP Link**
- Two bidirectional RS-232 ports for display and switcher control
- Network monitoring and control
- Front panel security lockout
- Configurable tri-color backlit buttons
- Volume control with indicators
- Support for optional IRCM control modules
Selecting A Projector For WallVault Systems

WallVault Systems work with virtually any projector. However, in order to enable the full benefits of system control and network monitoring, it is important to select a projector that includes the following features:

RS-232 Control Port with Bidirectional Communication:
Many projectors provide only IR control or unidirectional RS-232. Bidirectional RS-232 allows a projector to both receive commands and provide status feedback to the control system. This capability is important for transmitting information about the projector to the GlobalViewer Web application via the controller’s IP Link technology.

Communication During Standby Mode:
Some projectors do not have the ability to communicate with a control system while in standby mode. In order to fully utilize the security features in IP Link technology, such as the detection of a projector that has been disconnected, it is important to select a projector that can communicate during standby mode.

Rich Set of Monitoring Commands:
The more data available from the projector via RS-232, the better. Examples of useful data include: lamp hours, temperature, filter status, current input selected, projector on/off, video mute status, etc.

Brightness:
A projector of at least 2000 ANSI lumens is recommended in order to provide good visibility in brightly lit rooms.

For more information, contact the Extron Education Support Team.

USFM 100
Short-Throw Projector Mount and Equipment Enclosure
• Available exclusively as part of a PoleVault®, WallVault, or VoiceLift System
• Secure enclosure provides storage and protection of AV system equipment
• Adjustable arm accommodates projectors with a variety of throw distances up to 30 inches
• Mounts on either 16” or 24” stud walls
• Knockouts for conduit and raceway

UPB 25
Universal Projector Bracket
• Universal projector mount compatible with nearly every projector up to 25 pounds
• Independent adjustments of horizontal tilt or roll, vertical angle or pitch, and rotation or yaw
• Precise positioning adjustments are maintained even if projector is removed for service
• Built-in security tabs to prevent theft
• Projector mounting hardware included for attaching projectors to the UPB 25
• Optional security hardware, part # 70-555-01

PVS 305SA IP
Five Input IP-Enabled PoleVault Switcher with Integrated 50 Watt Stereo Audio Amplifier
• Available exclusively as part of a PoleVault System
• Receives high resolution VGA computer-video, composite video, and stereo audio signals from PoleVault AV input wallplates
• Integrated 50 watt rms audio amplifier for stereo or dual mono audio
• Four port network switch allows three devices to share a single network drop
• VoiceLift Receiver input for VoiceLift Microphone
• Switched auxiliary audio input for audio from an HDMI/DVI video source or MP3 player
Optional Products

WallVault Systems can be customized to meet the specific requirements of the room. A wide range of options is available, including optional controller models, additional AV inputs, speakers, mounting hardware, and more. For example, users can specify an additional pair of speakers, add microphone support, select optional mounting hardware, and specify black components, rather than the standard white color. The following two pages provide details on just a few of the options available. Extron System Design and Support Specialists are standing by to assist with any WallVault System design and customization.

### Optional AV Inputs

Additional Control Options

Advances in educational technology are changing the way that instructors interact with the presentation environment. In some cases, it may be inconvenient to access AV capabilities from a fixed controller mounted on a wall or lectern. For these situations, Extron offers a variety of options for controlling the WallVault System from a Web page, iPad®, or Windows® PC.

### Web-Based Graphical User Interface

Each PoleVault System comes with a Web-based Graphical User Interface or GUI. This allows the classroom AV system to be controlled from any computer running Internet Explorer® with access to the network.

![Web-Based Graphical User Interface](image)

### MediaLink for iPad

Extron’s MediaLink for iPad is an AV control system app designed for the Apple® iPad. It provides users with an additional point of control for rooms with an Ethernet-enabled MediaLink controller. Presenters can wirelessly control the AV system using a Wi-Fi network, allowing them the freedom to move throughout the room. MediaLink for iPad is available for download at the Apple iTunes App Store.

![MediaLink for iPad](image)

### MediaLink for Windows

Extron MediaLink for Windows is an AV control system application designed for computers running Microsoft® Windows. It allows the classroom computer to become an additional point of AV system control for rooms equipped with an Ethernet-enabled MediaLink controller. The application is small in size, and may be easily docked and hidden. This provides convenient and easy access to the AV control system, while presenting from the same computer.

WALLVAULT SYSTEMS ARE EASY TO CUSTOMIZE

There are six standard WallVault System packages that streamline the design and procurement process. These two-, three-, and four-input packages include all the necessary audio and video switching, audio amplification, system control, source connectivity, speakers, mounting hardware, and cabling for a complete classroom AV solution. All that remains is to add the video projector or display, and sources.

Extron WallVault Systems take their name from the unique USFM 100 and WMK 150 enclosures that securely mount and conceal system switching and audio amplification components to a wall.

System Customization

All WallVault Systems can be customized to meet specific classroom requirements. Each system must always include the PVS 305SA IP Switcher, which is available only in a WallVault System, a USFM 100 or WMK 150 enclosure, speakers, and two to four AV input wallplates.

The WallVault System Configurator at www.extronclassroom.com/cc is an online, drag-and-drop configuration utility that allows users to design WallVault Systems using the Extron Web site. The dynamic, graphical user interface makes system customization easy. Only the available choices are shown as you build your system. Helpful wizards ensure that only valid systems are built and vital accessories are included. In each standard system, certain components can be changed. For example, users can specify an additional pair of speakers, add wallplates, and select component colors.

A wide range of options are available. The WallVault System Configurator can also be used to print or save an equipment list and submit a request for quote to Extron Sales. Extron System Design and Support Specialists are standing by to assist with any WallVault System design and customization.

The Extron Classroom AV System Grant Program provides increased visibility to K-12 educational technology projects by supplying selected pilot classrooms with advanced audio/video solutions. It has been proven that the use of audiovisual technology in the classroom increases student interest, participation, and achievement. The goal of the pilot classroom is to demonstrate the ease-of-use and benefits of Extron classroom AV technology to both teachers and administrators. The grant award includes installation of an Extron Classroom AV System and complete training.

How to Apply

Applying for the Extron Classroom System Grant is easy. Our online application at www.extronclassroom.com/grant takes only minutes to complete. Simply provide your contact information and location, as well as details on your classroom environment. Once your information has been submitted, an Extron Grant Administrator will review the application and contact you to discuss your project.

Training and Installation Included

Once the grant has been awarded, an authorized Extron integrator will contact you to review the details of the system and schedule installation and training. All equipment, installation, and training are provided free of charge, with no required commitment for future purchases.

24/7 Customer Support

Your grant classroom is backed by Extron’s industry leading S3 support. We offer 24/7 telephone assistance and have a nationwide network of specialists to ensure the system is optimized for your application. In addition, you will have access to the Extron K-12 Web site which offers additional resources including product information, manuals, white papers, How To videos, case studies, and more.

Grants are available for the following systems:

PoleVault Systems for ceiling mounted projectors and
WallVault Systems for wall mounted projectors/displays:

PoleVault and WallVault Systems are designed by Extron for classrooms with either a ceiling mounted projector, wall mounted projector, or flat panel display. They are complete, centralized AV systems which include an AV switcher with integrated 50 watt amplifier, AV input wallplates, MediaLink controller, patented Flat Field speakers, mounting hardware and cables, as well as Free GlobalViewer for remote control and management over a network. Also included is the Extron VoiceLift Microphone which further enhances PoleVault and WallVault Systems by evenly distributing the teacher’s voice throughout the room.

VoiceLift® Microphone:

VoiceLift Microphone Systems are infrared wireless microphone systems that evenly distribute the teacher’s voice throughout the classroom. Standalone VoiceLift Microphone Systems provide a seamless upgrade path to PoleVault or WallVault with no duplication or replacement of equipment.

Districts Standardizing on Extron PoleVault, WallVault, or VoiceLift Systems
