

DMP 128 Plus C V

DMP 128 Plus C V AT

Cisco CUCM Configuration Guide

REVISION: 1.2.1
DATE: MARCH 7TH, 2018

Revision Log

Date	Version	Notes
Aug. 4 th 2017	1.0	First Release: Applies to Firmware Version 1.01.0004.002
Sep. 1 st 2017	1.1	Corrected error in system import procedure. Applies to Firmware 1.01.0004.002
Jan. 9 th 2018	1.2	Added new features and CUCM configuration updates for 1.01.0007.004
Mar. 7 th 2018	1.2.1	Layout and language changes for emphasis

- Appendix B: Outgoing Call Termination Mode 18

1.0 Introduction

This document provides essential instructions for registering DMP 128 Plus C V (AT) VoIP lines to a Cisco Unified Call Manager (CUCM) system (Version 10.0 onwards).

DMP 128 Plus C V / C V AT Firmware Version **1.01.0007-004**.

2.0 Configuring CUCM for DMP 128 Plus CV (AT) VoIP Registration

- VoIP functionality within the DMP 128 Plus is built around the Session Initiation Protocol (SIP) signaling system, as defined in RFC 3261. The CUCM platform must be licensed to allow the addition of generic basic third-party SIP endpoints before any line registration can take place.
- The DMP 128 Plus requires that the **Early Offer** call initialization model be used.

2.1 Security Profile

A Security Profile is required prior to the registration of any DMP 128 Plus VoIP lines.

- 1) Access the Cisco Unified CM Management interface.
- 2) Add a new Phone Security Profile.
- 3) Select **Third-Party SIP Device (Basic)** as the profile type.
- 4) Name the security profile using a suitable reference, e.g. *Extron SIP*.
- 5) Set the **Nonce Validity Time** to **600**.
- 6) Select the appropriate transport type (the DMP can use either UDP or TCP as required).
- 7) Set the desired signaling port (default for the DMP is **5060**).

2.2 End User

An End User account is required for each VoIP line registered on the DMP 128 Plus.

- 1) Specify a User ID for the line (e.g. 1001, DMP1001, DMPConfRoom).
- 2) Set a password and PIN.
- 3) Leave other values at the default CUCM end user settings.

2.3 SIP Profile

A SIP profile is required for the DMP 128 Plus.

- 1) In the CUCM interface, select **Device** followed by **Device Settings**.
- 2) Select **SIP Profile**.
- 3) Locate the **Standard SIP Profile** and make a copy.
- 4) In the **SIP Profile Configuration** window, assign the copy profile a suitable name, e.g. *Extron SIP Profile*.
- 5) Specify the following settings:

SIP Profile Information	
Name*	Extron SIP Profile
Description	Extron SIP Profile
Default MTP Telephony Event Payload Type*	101
Early Offer for G.Clear Calls*	Disabled
User-Agent and Server header information*	Send Unified CM Version Information as User-Agent
Version in User Agent and Server Header*	Major And Minor
Dial String Interpretation*	Phone number consists of characters 0-9, *, #, and
Confidential Access Level Headers*	Disabled
<input type="checkbox"/> Redirect by Application <input type="checkbox"/> Disable Early Media on 180 <input type="checkbox"/> Outgoing T.38 INVITE include audio mline <input type="checkbox"/> Offer valid IP and Send/Receive mode only for T.38 Fax Relay <input type="checkbox"/> Use Fully Qualified Domain Name in SIP Requests <input type="checkbox"/> Assured Services SIP conformance <input type="checkbox"/> Enable External QoS**	
SDP Information	
SDP Session-level Bandwidth Modifier for Early Offer and Re-invites*	TIAS and AS
SDP Transparency Profile	Pass all unknown SDP attributes
Accept Audio Codec Preferences in Received Offer*	Default
<input type="checkbox"/> Require SDP Inactive Exchange for Mid-Call Media Change <input type="checkbox"/> Allow RR/RS bandwidth modifier (RFC 3556)	

4

6) When configuring the Trunk, **Early Offer Support must be set to Mandatory**. An MTP should be used if required:

Trunk Specific Configuration	
Reroute Incoming Request to new Trunk based on*	Never
Resource Priority Namespace List	< None >
SIP Rel1XX Options*	Disabled
Video Call Traffic Class*	Mixed
Calling Line Identification Presentation*	Default
Session Refresh Method*	Invite
Early Offer support for voice and video calls*	Mandatory (insert MTP if needed)
<input type="checkbox"/> Enable ANAT	
<input type="checkbox"/> Deliver Conference Bridge Identifier	
<input type="checkbox"/> Allow Passthrough of Configured Line Device Caller Information	
<input type="checkbox"/> Reject Anonymous Incoming Calls	
<input type="checkbox"/> Reject Anonymous Outgoing Calls	
<input type="checkbox"/> Send ILS Learned Destination Route String	
<input type="checkbox"/> Connect Inbound Call before Playing Queuing Announcement	
SIP OPTIONS Ping	
<input type="checkbox"/> Enable OPTIONS Ping to monitor destination status for Trunks with Service Type "None (Default)"	
Ping Interval for In-service and Partially In-service Trunks (seconds)*	60
Ping Interval for Out-of-service Trunks (seconds)*	120
Ping Retry Timer (milliseconds)*	500
Ping Retry Count*	6
SDP Information	
<input type="checkbox"/> Send send-receive SDP in mid-call INVITE	
<input type="checkbox"/> Allow Presentation Sharing using BFCP	
<input type="checkbox"/> Allow iX Application Media	
<input type="checkbox"/> Allow multiple codecs in answer SDP	

6

7) Apply and save the configuration.

2.4 Add a SIP Phone

- 1) Select **Device** followed by **Phone** and **Add New**.
- 2) Select **Third Party SIP Device (Basic)** before clicking **Next**.
- 3) Enter the MAC address of the DMP 128 Plus (either LAN1 or LAN2). The MAC address is found on a sticker affixed to the rear panel of the unit.
- 4) The Owner User ID must be set to match the User ID specified in Section [2.2](#).
- 5) The remaining parameters must be set as follows:

Device Information	
<input checked="" type="checkbox"/> Device is Active	
<input type="checkbox"/> Device is not trusted	
MAC Address*	0005A60E326A
Description	10814
Device Pool*	Default View Details
Common Device Configuration	< None > View Details
Phone Button Template*	Third-party SIP Device (Basic)
Common Phone Profile*	Standard Common Phone Profile View Details
Calling Search Space	International-CSS
AAR Calling Search Space	< None >
Media Resource Group List	< None >
Location*	Hub_None
AAR Group	< None >
Device Mobility Mode*	Default View Current Device Mobility Settings
Owner	<input checked="" type="radio"/> User <input type="radio"/> Anonymous (Public/Shared Space)
Owner User ID*	10814
Mobility User ID	< None >
Use Trusted Relay Point*	Default
Always Use Prime Line*	Default
Always Use Prime Line for Voice Message*	Default
Geolocation	< None >
<input type="checkbox"/> Ignore Presentation Indicators (internal calls only)	
<input checked="" type="checkbox"/> Logged Into Hunt Group	
<input type="checkbox"/> Remote Device	

- 6) The **Protocol Specific Information** must be set as follows, where **SIP Profile** is the name of the profile defined in Section [2.3](#), and **Digest User** is the user ID defined in Section [2.2](#).

Number Presentation Transformation	
Caller ID For Calls From This Phone	
Calling Party Transformation CSS	< None >
<input checked="" type="checkbox"/> Use Device Pool Calling Party Transformation CSS (Caller ID For Calls From This Phone)	
Remote Number	
Calling Party Transformation CSS	< None >
<input checked="" type="checkbox"/> Use Device Pool Calling Party Transformation CSS (Device Mobility Related Information)	
Protocol Specific Information	
BLF Presence Group*	Standard Presence group
MTP Preferred Originating Codec*	711ulaw
Device Security Profile*	Third-Party SIP Devices Basic - Digest Required
Rerouting Calling Search Space	< None >
SUBSCRIBE Calling Search Space	< None >
SIP Profile*	Extron SIP Profile View Details
Digest User	10814
<input checked="" type="checkbox"/> Media Termination Point Required	
<input type="checkbox"/> Unattended Port	
<input type="checkbox"/> Require DTMF Reception	

6

- 7) Save and Apply the configuration.

2.5 Add a Directory Number

- 1) Click on the link named **Add a New DN**.
- 2) Specify a directory number.
- 3) Apply and Save the configuration.

3.0 Configuring DMP 128 Plus C V (AT) VoIP Lines

VoIP configuration of the DMP 128 Plus is handled exclusively through a web interface, served from the device itself. The VoIP landing page is accessed through an address of the format -

<http://192.168.254.254/www/voip.html>

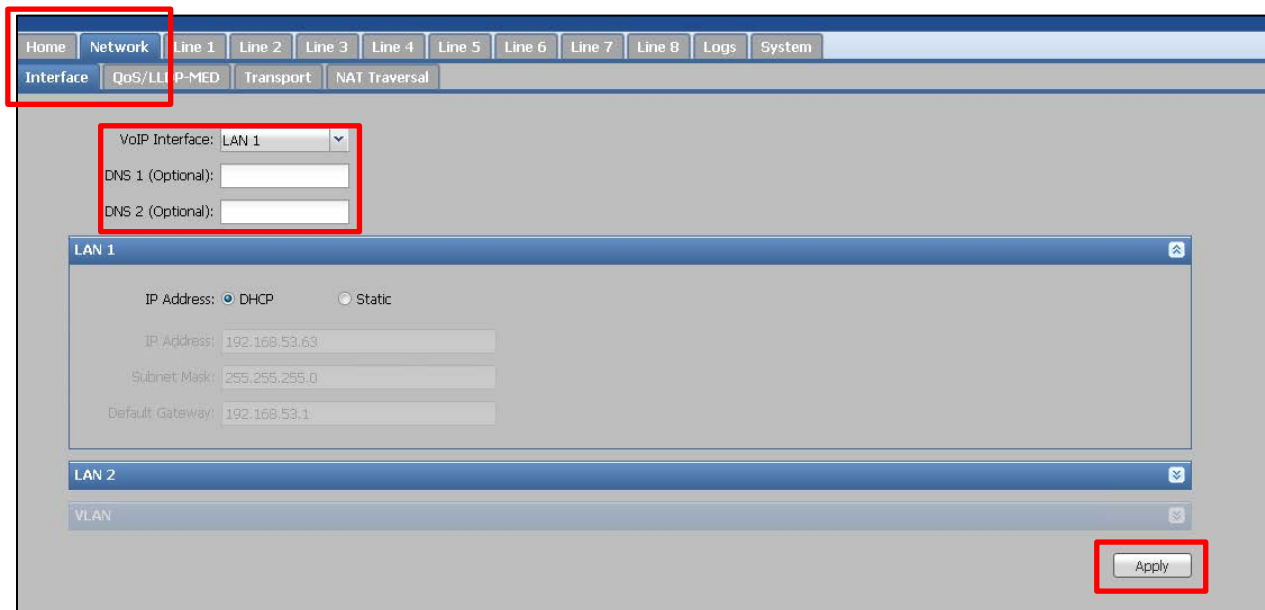

- where 192.168.254.254 in this example is the default IP address of the DMP 128 Plus device.

Up to 8 lines may be configured. Note that each line intended for use will require a unique Directory Number to be specified as part of the CUCM configuration process.

3.1 Network Interface Configuration

Click on the **Network** tab followed by **Interface** tab to set up the desired network interface on the DMP 128 Plus; either LAN1 or LAN2 may be used for VoIP. VLAN tagging is available on either interface if required. Up to two DNS entries may be manually specified.

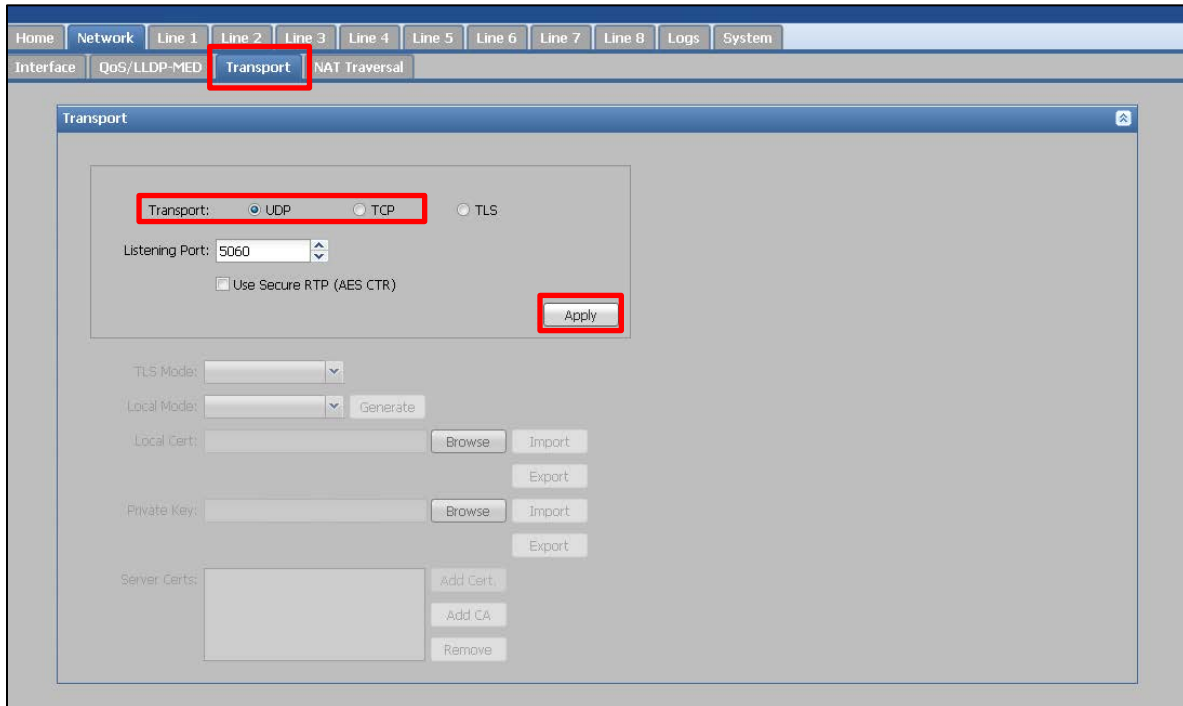

Click **Apply** after making any changes to restart the networking services on the device.

3.2 Transport Configuration

Click on the **Transport** tab to access signaling transport configuration. Set the transport to either UDP or TCP as per the CUCM configuration in Section [2.1](#). The default transport type for the DMP is UDP. **Note:** At the time of writing, TLS may be used only on Line 1 (a future firmware update will address this issue).

In the event that changes need to be made, click **Apply** to commit any adjustments to the device.

3.3 Line Registration

Click on the first line tab to be configured as part of the system, e.g. **Line 1**.

- 1) **User Name:** Set this to match the numeric DN specified in Section [2.5](#).
- 2) **Authentication User Name:** Set this to match the User ID specified Section [2.2](#).
- 3) **Authentication Password:** Set to match the password as specified in Section [2.2](#).
- 4) **Display Name:** Optional. Specify an identifier for the line if required.
- 5) **Primary Proxy Name/IP:** Specify either the IP address or domain name of CUCM.
- 6) **Primary Proxy Port:** Specify the port number as required. The default is 5060.

Once the above settings have been entered, click the **Apply** button to save to the device.

Click the **Register** button to initiate registration to CUCM. If successful, the registration status to the right of the Register/Unregister buttons will indicate *Registered – Primary*.

The screenshot shows the Cisco CUCM configuration interface for Line 1. The 'Line 1' tab is selected in the top navigation bar. The 'Registration' sub-tab is active, showing the following configuration fields:

- * User Name: 10814
- Authentication User Name: DMP1001
- Authentication Password: [Redacted]
- Display Name: DMP Line 1
- * Primary Proxy Name/IP: 10.113.122.200
- Primary Proxy Port: 5060

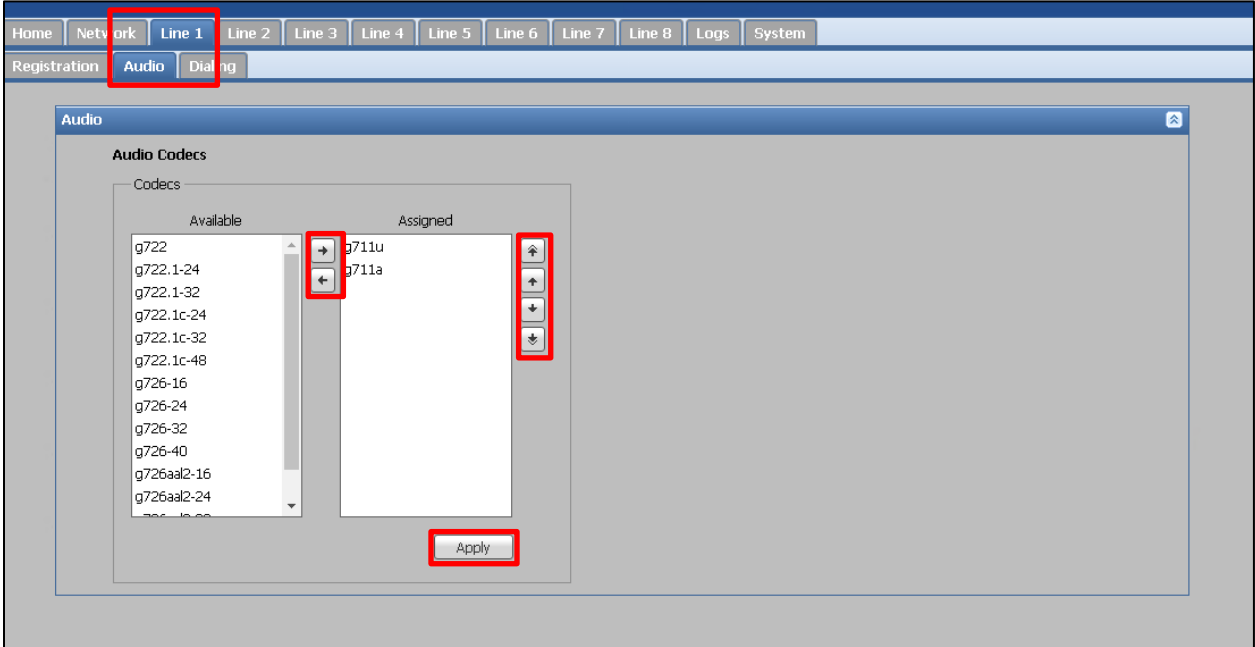

* Denotes Required Field

The 'Apply' button is highlighted with a red box. At the bottom of the interface, the 'Register' button is also highlighted with a red box, and the status is shown as 'Status: Not Registered'.

3.4 Codecs

The availability and priority of codecs may be changed from within the **Audio** tab. Codecs will only be available for use within phone calls if they are moved from the **Available** to the **Assigned** column. By default, G.711u and G.711a are assigned to the system. Codec assignment and priority can be set per line.

Click the **Apply** button to commit any changes to the device.

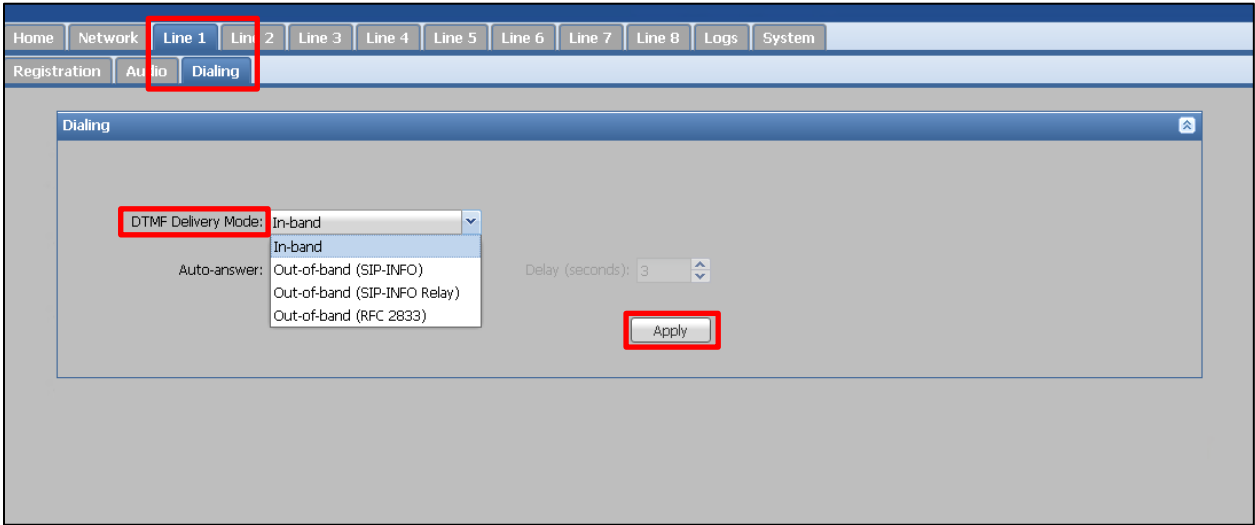

3.5 Dialing

Use the **Dialing** tab to select the desired DTMF signaling method for the CUCM system. The default mode is In-Band. Other available options are as follows:

- Out of Band – SIP INFO
- Out of Band – SIP INFO (RELAY)
- Out of Band – RFC 2833

Click **Apply** after selecting the desired DTMF signaling method for the line. This can be set per line.

3.6 System Overview

Once all required lines have been registered to CUCM, use the **Home** tab to view a summary of the system, as required. In the example below, one of two registered lines (line 3) is currently in an active call. Appearance-specific (caller-specific) details for active calls can be accessed by clicking on the corresponding Line entry.

The screenshot shows the Cisco CUCM interface with the 'Home' tab selected. The 'VoIP Status' table lists lines 1 through 8. Line 3 is highlighted in green, indicating it is in an active call. Below the main table, the 'Details Line 3' section shows a call log for appearance 1 with codec g711u, duration 00:00:24, 1169 packets received, 0 packet drops, and 55ms jitter.

Line	Registration	Audio DSP	Call Status	Packets Rx	Packet Drop	Jitter Rx (ms)	Duration
Line 1	Not Configured	Configured	--	--	--	--	--
Line 2	Not Configured	Configured	--	--	--	--	--
Line 3	Registered - Primary	Configured		1169	0	55	00:00:24
Line 4	Registered - Primary	Configured		--	--	--	--
Line 5	Not Registered	Configured		--	--	--	--
Line 6	Not Registered	Configured		--	--	--	--
Line 7	Not Registered	Configured		--	--	--	--
Line 8	Not Registered	Configured		--	--	--	--

Appearance	Codec	Duration	Packets Rx	Packet Drop	Jitter Rx (ms)
1	g711u	00:00:24	1169	0	55

3.7 Troubleshooting

In the event of failure to register, review the following:

- Check that the credentials specified as part of the CUCM setup are correctly entered into the registration fields for each line.
- Check network interface settings, including DNS fields (particularly if a proxy domain name is being used rather than an IP address).
- Click on the **Logs** tab to inbound and outbound SIP transactions. The absence of inbound transactions indicates a network routing problem. Registration-specific problems may be indicated by corresponding SIP responses such as *403 – Forbidden*.
- If the Logs indicate a registration failure, edit the Cisco account so that User ID and Digest User are the same as the Directory Number (DN). Then, update both the User Name **and** Authentication Name fields on the DMP with the Directory Number (DN). Although this is not a prerequisite for registration, it may assist in identifying configuration issues.

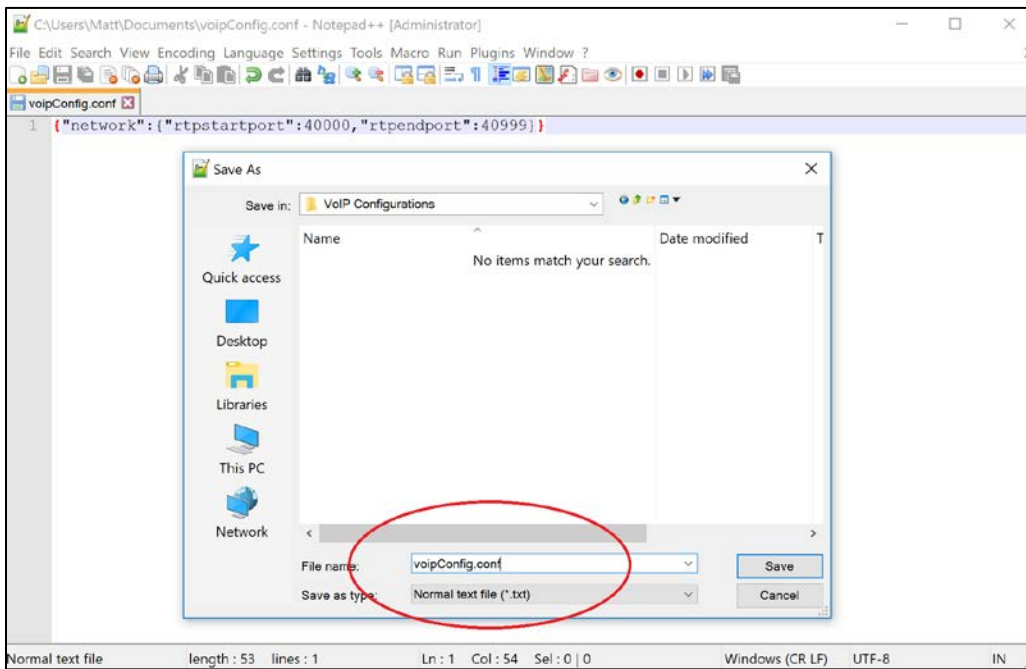

Appendix A: RTP Port Range

The default port range for VoIP RTP traffic on the DMP is **50000 – 50999**. To change this range, the following steps must be carried out.

1. Create a new blank text file using a suitable basic text editor.
2. Enter the following text into the document (in this example, the port range is being changed to 40000-40999; replace these values with the desired range) -

```
{"network": {"rtpstartport": 40000, "rtpendport": 40999}}
```

3. Save the file as **voipConfig.conf**.

4. Navigate to the DMP VoIP configuration webpage and click on the **System** tab.
5. Under **Export System Configuration**, click the **Export** button to back up the current VoIP configuration to disk. The file will be saved in the default web browser download directory.
6. Under **Import System Configuration**, click the **Browse** button to locate the **voipConfig.conf** file created in steps 1 to 3.

7. Click the **Import** button to update the DMP with the new RTP Port Range settings. A notification will appear once the settings have applied successfully.

Appendix B: Outgoing Call Termination Mode

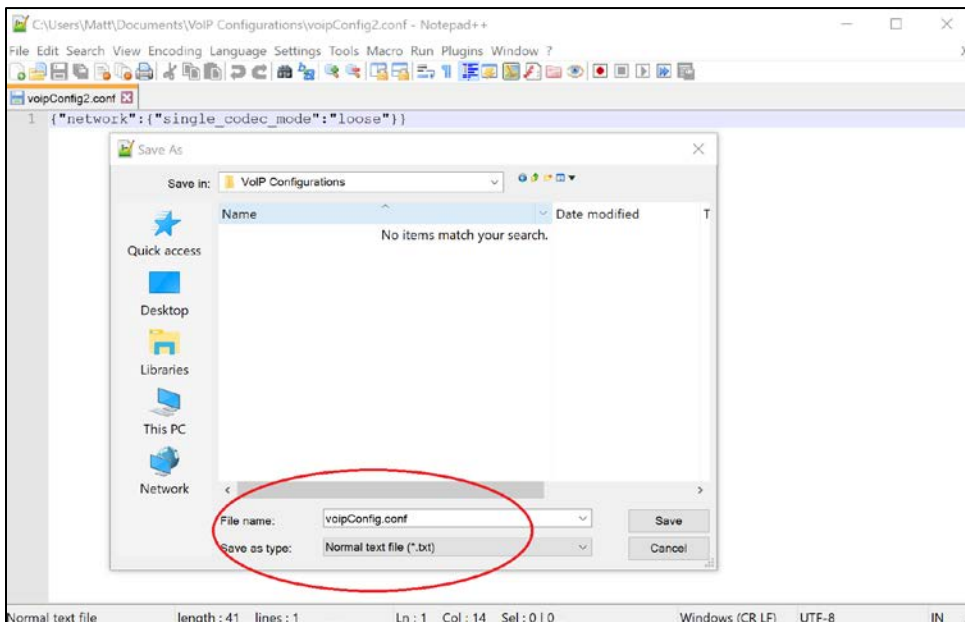

Some call server configurations require the use of a CANCEL SIP message to terminate unanswered outgoing calls, rather than a traditional BYE message. This requirement will become apparent if far end devices continue to ring after the DMP has ended the call.

To change the outgoing call terminate mode from BYE to CANCEL (default is BYE), the following steps must be carried out. **Requires FW 1.01.0007-b004 or later.**

1. Create a new blank text file using a suitable basic text editor
2. Enter the following text into the document -

```
{"network":{"sip_outgoing_termination_use_cancel_enable":true}}
```

3. Save the file as **voipConfig.conf**.

4. Navigate to the DMP VoIP configuration webpage and click on the **System** tab.
5. Under **Export System Configuration**, click the **Export** button in order to back up the current VoIP configuration to disk. The file will be saved in the default web browser download directory.
6. Under **Import System Configuration**, click the **Browse** button to locate the **voipConfig.conf** file created in steps 1 to 3.

Click the **Import** button to update the DMP with the new settings. A notification will appear once the settings have applied successfully.

To return to BYE mode, send the following string using the same method:

```
{"network":{"sip_outgoing_termination_use_cancel_enable":false}}
```
